Re: Safety Training Event – Barling, AR – 12-05-2009

Mr. Kennedy,

I would like to offer my thanks to you for inviting me to your safety training event this past Saturday. During this training exercise, safety committee members and Hugg & Hall personnel were providing training to employees from your various yards on topics which emphasized equipment operation and safety. Equipment included forklifts, scissor lifts, ladders, telehandlers, and boom lifts. I was very impressed with the quality of training and hands on approach that you used through the multiple training stations. All employees were allowed to operate equipment which contributed to their understanding of how to safely use them at a job site. During the training, several employees indicated that this training was beneficial and consistent with common exposures they face on their job sites. In addition to hands on applications, employees viewed several videos, received instruction from experienced supervisors, and completed written tests which served to affirm their comprehension. Employees were also given certification cards for the equipment they were trained on. It's not too often that I have the opportunity to work with contractors whose field supervisors and safety team members display the level of commitment that I have seen from Action Mechanical. Keep up the good work!

As always, please let me know if there are any immediate risk control needs you might have in the immediate future. I look forward to seeing you again in the next couple of months to possibly look at a job site and pass along some of the resources and materials that we spoke about on Saturday concerning fall protection and excavation safety.

Sincerely,

Adam Sellars
